MOVING FAST TOWARD YOUR RESEARCH

ALLELE-SPECIFIC GENOTYPING SERVICE

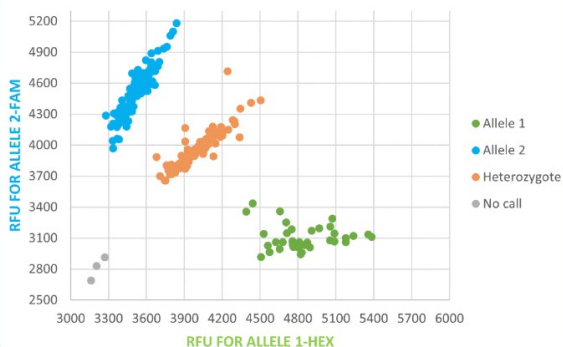

Revealing Your DNA's Hidden Diversity!

Refers to the process of confirming the accuracy and reliability of SNP and indel analysis results. Allele-specific genotyping service involves various techniques and methods to verify the presence or absence of specific SNPs and indels in a sample or population. To ensure that the detected SNP and indel variations are real and not the result of experimental errors or artifacts.

With our allele-specific genotyping service, you can obtain valuable information about allelic frequencies, genotype distribution, and genetic variations present in your samples. This knowledge can aid in understanding disease susceptibility, drug response, population genetics, or genetic diversity.

"Unlocking the Secrets of Your Genes"

Workflow

1. Filling in the order form and sending the sample to our laboratory.

2. Preparing and running the reaction.

3. Data analysis and result report submission to customer.
